

Task 1: Create an AWS EC2 Instance

Step 1.1: Launch the Instance

1. Log in to your **AWS Management Console**.
2. Navigate to **EC2** and click **Launch instance**.
3. **Name:** DevOps-Intern-Assessment
4. **Application and OS Images (AMI):** Select **Ubuntu** (choose the *Ubuntu Server 24.04 LTS* or *22.04 LTS - Free Tier Eligible*).
5. **Instance type:** `t2.micro` (Free tier eligible).
6. **Key pair:** Click **Create new key pair**.
 - o Name it `devops-key`.
 - o Private key file format: Select `.pem` (for Mac/Linux or Windows OpenSSH) or `.ppk` (for PuTTY).
 - o Download and save it securely.

Step 1.2: Configure Network & Security Group

- Under **Network settings**, check the following boxes:
 - Allow SSH traffic from** -> Select *Anywhere* (0.0.0.0/0) or *My IP* (safer).
 - Allow HTTP traffic from the internet** (This opens port 80).
- Click **Launch instance**.
-

Step 1.3: Connect via SSH

Open your terminal (or Git Bash on Windows) and run:

Bash

```
# 1. Navigate to where you downloaded your key  
cd /path/to/your/key
```

```
# 2. Change permissions of the key file (Required for Linux/Mac)  
chmod 400 devops-key.pem
```

```
# 3. Connect to your instance (Get the Public IP from your EC2 dashboard)  
ssh -i "devops-key.pem" ubuntu@<YOUR_EC2_PUBLIC_IP>
```

Task 2: Linux Basics & Nginx Setup

Once logged into your EC2 instance via SSH, execute the following commands:

Step 2.1: Update Packages & Install Nginx

Bash

```
# Update the package lists
sudo apt update && sudo apt upgrade -y
```

```
# Install Nginx web server
sudo apt install nginx -y
```

Step 2.2: Check and Restart Nginx

Bash

```
# Check status
sudo systemctl status nginx
```

```
# Restart Nginx
sudo systemctl restart nginx
```

Step 2.3: Check System Metrics (Take screenshots of these)

Bash

```
# Check disk usage
df -h
```

```
# Check memory (RAM) usage
free -m
```

```
# Check running processes
top -n 1
```

Not secure 43.204.143.79

Welcome to nginx!

If you see this page, the nginx web server is successfully installed and working. Further configuration is required.

For online documentation and support please refer to nginx.org.
Commercial support is available at nginx.com.

Thank you for using nginx.

Type here to search

5:34 PM 7/9/2026

Task 3: Host a Simple Website

Step 3.1: Create your Custom HTML File

We will replace the default Nginx landing page with your personal assignment details.

Bash

```
# Navigate to the web root directory
cd /var/www/html

# Backup the original index page
sudo mv index.nginx-debian.html index.nginx-debian.html.bak

# Create a new index.html file
sudo nano index.html
```

Step 3.2: Add Content

Paste the following HTML template into the editor (replace the placeholder text with your actual details):

HTML

```
<!DOCTYPE html>

<html lang="en">

<head>

  <meta charset="UTF-8">

  <title>My DevOps Assignment</title>

  <style>

    body { font-family: Arial, sans-serif; text-align: center; margin-top:
80px; background:#f4f4f4; }

    h1 { color: #2c3e50; }

    p { font-size: 18px; color: #34495e; }

  </style>

</head>

<body>

  <h1>Hello, I'm OM MOHAN CHAVAN</h1>
```

```
<p><b>College:</b> VISHVLATA COLLAGE NASHIK</p>
```

```
<p><b>Branch:</b> COMPUTER SCIENCE ]</p>
```

```
<p><b>Email:</b> chavhanom039@gmail.com</p>
```

```
<p><b>Date:</b> <span id="date"></span></p>
```

```
<script>
```

```
    document.getElementById("date").innerText = new Date().toLocaleString();
```

```
</script>
```

```
</body>
```

```
</html>
```

Step 3.3: Verify

Open your browser and enter your **EC2 Public IP** address (http://<YOUR_EC2_PUBLIC_IP>). You should see your custom web page.

```

Bonus Tasks

Since the assignment lists a few options, here are the guides for **Bonus Task A (Attach an Elastic IP)** and **Bonus Task B (Install Docker and run hello-world)** to maximize your credit.

Bonus A: Attach an Elastic IP

1. Go to your **AWS Console** -> **EC2 Dashboard**.
2. On the left menu under *Network & Security*, click **Elastic IPs**.
3. Click **Allocate Elastic IP address**, leave defaults, and click **Allocate**.
4. Select your newly created Elastic IP, click **Actions** -> **Associate Elastic IP address**.
5. Select your **Instance** from the list and click **Associate**. *(Note: Use this new IP to access your website and update your GitHub documentation if needed).*

Bonus B: Install Docker and Run Hello-World

Back in your EC2 terminal terminal, execute:

Bash

```
# Install Docker
sudo apt install docker.io -y

# Start and enable Docker service
sudo systemctl start docker
sudo systemctl enable docker

# Run the hello-world container to verify
sudo docker run hello-world
```

Deliverable Screenshot Reminder: Take a screenshot of the terminal output showing the "Hello from Docker!" success message.
